

Have you made
the move?

Communication...

It's always been a business necessity—but today it goes far beyond picking up the phone. PDAs and cell phones are the media through which business takes place today—sometimes on a 24-hour basis. There's no such thing as 8:00 a.m. to 5:00 p.m. anymore. You need to be in touch with your employees, your business partners, and your customers constantly.

What you may have not considered though is that your operations can now be managed within this new business model. What if you could mobilize your operations, freeing your staff to be where you need them when you need them? What if you could acquire and store data anytime, anywhere—regardless of your physical location?

If you could transform the old clipboard paradigm to an electronic data acquisition system, would your staff and business benefit by recording transactions when they happen and looking up data when it's needed?

What if your staff could be in touch with the very systems that run your business whenever they require attention? Web servers. Databases. Application Servers. Problems could be resolved right then and there—and downtime could almost become a thing of the past.

What if instead of an entire third shift, a few highly qualified people could be instantly informed of any problem or any issue that requires human intervention? Or, in cases where a physical presence is required, what if your staff could roam your facility freely—all the while collecting and recording data in real-time.

If you and your staff could constantly monitor and be directly in touch with the systems that run your business, how much would you gain in productivity, service levels, and uptime? In a word, plenty—and that's why InduSoft created CEView.

Real-time, All the Time, Everywhere

CEView is not a new offering. For nearly a decade InduSoft has provided the most practical, technologically advanced solutions for monitoring and controlling equipment—all in the palm of your hand. InduSoft has automation solutions to collect and compile data, correct problems as they occur, and produce reports that help you manage your business. And we can help you take that data wherever you need your staff to be.

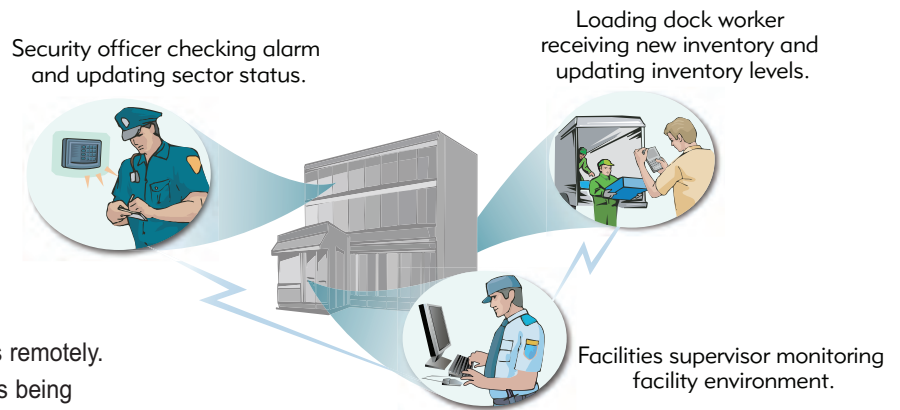

At InduSoft we realized the potential of mobile technology when it was still in its infancy. We had the vision to understand that cell phones, PDAs, and mobile computers would eventually transform the very way that businesses operate. That a mobile business paradigm was not only inevitable—it was rapidly approaching.

And out of that vision we created a way to keep your finger on the pulse of your business—anytime, everywhere.

CEView: Full-scale Power in a Mobile Paradigm

With CEView you get all the power of our full-scale monitoring solutions on any mobile device that supports Microsoft Windows CE® or Microsoft Windows Mobile®. If you have WinCE and a WiFi connection, you're in business.

Imagine being able to pull up productivity reports remotely. Imagine your plant engineers or IT administrators being notified at one location the moment a problem occurs in another—and imagine being able to take corrective action immediately.

Just like our full-scale solution, CEView collects data throughout your facilities in real time. An easy-to-use interface enables you to centrally monitor, analyze, and forecast key performance indicators—right away, anywhere—with just a few strokes of your stylus. Without interrupting production, applications and databases can communicate and compare events as they occur, so necessary action can be taken immediately. The data correlation engine in our powerful, handheld solution enables the comparison of historical data to current data and provides warnings and alarms when thresholds are exceeded.

InduSoft's simple, drilldown capability enables you to pinpoint problems and specify them immediately anywhere you happen to be. It also produces reports that enable you to monitor performance and quality ongoing, and continually optimize performance, as you implement needed changes. Trends are established using graphs, charts, and tables and are supported by local, rich graphics. You're in control even when you're not on-site.

A New Architecture for a New World

As an independent software vendor, InduSoft made a strategic decision to invest valuable development resources in Windows CE from the moment it was available. Why? Because it was clear to us from the very beginning that Windows CE would make it possible for countless hardware vendors to provide mobile computing devices. And now that investment is paying off for our customers.

Once you have an InduSoft mobile solution, it can be extended to any device running CEView or Windows Mobile. You aren't locked into a proprietary hardware solution, which is an advantage very few other vendors can match.

And that's not all. CEView is a unique offering in the industry. With CEView, data can reside native to any CE-based PDA, Tablet PC, or industrial device. Monitors in your environment can relay information directly to your wireless device without connecting to the primary application server or SQL server. Collect your data, make any necessary adjustments, and simply push a button to upload your changes. The pay-off to you is improved performance, and the convenience of being able to synchronize your data at your discretion.

This innovative approach is typical of how we do business. As an InduSoft customer you can rest assured that the solutions we offer are developed with visionary thinking and future trends in mind. You'll never find yourself trying to catch up to the next trend in the industry. With InduSoft you'll have tomorrow's solutions today.

An Articulate Interface

All InduSoft offerings have a distinct advantage in our interface, and CEView is no different. Clean, articulate, and intuitive. Rich graphics and colors enable your staff to easily interpret both historical and current data quickly and effectively. That's a significant advantage because your staff can take corrective actions immediately; your operation is more efficient and more effective. Better response time today for better performance tomorrow.

Upgrades When You Need Them

At InduSoft we're constantly apprised of new, upcoming platforms and technology upgrades, and we continuously invest those new technologies into our entire product line. The InduSoft advantage inspires confidence in our customers that as new technology comes online, you'll be able to adopt it quickly and easily. On-time upgrades implemented quickly, for a smoother operation.

The InduSoft Advantage

When you do business with InduSoft, you can rest assured that our products and professional services are superior. InduSoft has built its business on satisfied customers, and we'll ensure your satisfaction too.

You won't find a better, more cost-efficient or more reliable way to meet service levels and grow your bottom line than with InduSoft Solutions. Enterprise-wide implementations are relatively simple—and with the easy-to-use interface—your staff will quickly come up to speed. That means a faster and more significant return on your investment than you can find with other offerings that claim to do as much, but don't really deliver.

For more information, to arrange for a demonstration, or to have a consultant determine how InduSoft can benefit your operations, contact us at 877-INDUSOFT or 512-349-0334 or e-mail us at info@indusoft.com.
